

# Package ‘partitionComparison’

August 23, 2023

**Type** Package

**Title** Implements Measures for the Comparison of Two Partitions

**Version** 0.2.6

**Date** 2023-08-23

**Author** Fabian Ball [aut, cre, cph, ctb],  
Andreas Geyer-Schulz [cph]

**Maintainer** Fabian Ball <mail@fabian-ball.de>

**Description** Provides several measures ((dis)similarity, distance/metric, correlation, entropy) for comparing two partitions of the same set of objects. The different measures can be assigned to three different classes: Pair comparison (containing the famous Jaccard and Rand indices), set based, and information theory based. Many of the implemented measures can be found in Albatineh AN, Niewiadomska-Bugaj M and Mihalko D (2006) <doi:10.1007/s00357-006-0017-z> and Meila M (2007) <doi:10.1016/j.jmva.2006.11.013>. Partitions are represented by vectors of class labels which allow a straightforward integration with existing clustering algorithms (e.g. kmeans()). The package is mostly based on the S4 object system.

partitionComparison-package

*partitionComparison: Implements Measures for the Comparison of Two Partitions*

---

## Description

Provides several measures ((dis)similarity, distance/metric, correlation, entropy) for comparing two partitions of the same set of objects. The different measures can be assigned to three different classes: Pair comparison (containing the famous Jaccard and Rand indices), set based, and information theory based. Many of the implemented measures can be found in Albatineh AN, Niewiadomska-Bugaj M and Mihalko D (2006) doi:[10.1007/s003570060017z](https://doi.org/10.1007/s003570060017z) and Meila M (2007) doi:[10.1016/j.jmva.2006.11.013](https://doi.org/10.1016/j.jmva.2006.11.013). Partitions are represented by vectors of class labels which allow a straightforward integration with existing clustering algorithms (e.g. `kmeans()`). The package is mostly based on the S4 object system.

## Details

This package provides a large collection of measures to compare two partitions. Some survey articles for these measures are cited below, the seminal papers for each individual measure is provided with the function definition.

Most functionality is implemented as S4 classes and methods so that an adoption is easily possible for special needs and specifications. The main class is `Partition` which merely wraps an atomic vector of length  $n$  for storing the class label of each object. The computation of all measures is designed to work on vectors of class labels.

All partition comparison methods can be called in the same way: `<measure method>(p, q)` with  $p$ ,  $q$  being the two partitions (as `Partition` instances). One often does not explicitly want to transform the vector of class labels (as output of another package's function/algorithm) into `Partition` instances before using measures from this package. For convenience, the function `registerPartitionVectorSignatures` exists which dynamically creates versions of all measures that will directly work with plain R vectors.

**Examples**

```
# Generate some data
set.seed(42)
data <- cbind(x=c(rnorm(50), rnorm(30, mean=5)), y=c(rnorm(50), rnorm(30, mean=5)))
# Run k-means with two/three centers
data.km2 <- kmeans(data, 2)
data.km3 <- kmeans(data, 3)

# Load this library
library(partitionComparison)
# Register the measures to take ANY input
registerPartitionVectorSignatures(environment())
# Compare the clusters
randIndex(data.km2$cluster, data.km3$cluster)
# [1] 0.8101266
```

---

adjustedRandIndex	<i>Adjusted Rand Index</i>
-------------------	----------------------------

---

**Description**

Compute the Adjusted Rand Index (ARI)

$$\frac{2(N_{00}N_{11} - N_{10}N_{01})}{N_{01}'N_{12} + N_{10}'N_{21}}$$

**Usage**

```
adjustedRandIndex(p, q)

## S4 method for signature 'Partition,Partition'
adjustedRandIndex(p, q)

## S4 method for signature 'PairCoefficients,missing'
adjustedRandIndex(p, q = NULL)
```

**Arguments**

p	The partition $P$ or an instance of <a href="#">PairCoefficients</a>
q	The partition $Q$ or NULL

**Methods (by class)**

- `adjustedRandIndex(p = Partition, q = Partition)`: Compute given two partitions
- `adjustedRandIndex(p = PairCoefficients, q = missing)`: Compute given the pair coefficients

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## References

Hubert L, Arabie P (1985). “Comparing Partitions.” *Journal of Classification*, **2**(1), 193–218.

## Examples

```
isTRUE(all.equal(adjustedRandIndex(new("Partition", c(0, 0, 0, 1, 1)),
                                     new("Partition", c(0, 0, 1, 1, 1))), 1/6))
```

---

baulieu1	<i>Baulieu Index 1</i>
----------	------------------------

---

## Description

Compute the index 1 of Baulieu

$$\frac{N^2 - N(N_{10} + N_{01}) + (N_{10} - N_{01})^2}{N^2}$$

## Usage

```
baulieu1(p, q)
```

```
## S4 method for signature 'Partition,Partition'
baulieu1(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
baulieu1(p, q = NULL)
```

## Arguments

p                      The partition  $P$  or an instance of [PairCoefficients](#)

q                      The partition  $Q$  or NULL

## Methods (by class)

- baulieu1(p = Partition, q = Partition): Compute given two partitions
- baulieu1(p = PairCoefficients, q = missing): Compute given the pair coefficients

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## References

**Examples**

```
isTRUE(all.equal(baulieu1(new("Partition", c(0, 0, 0, 1, 1)),
                          new("Partition", c(0, 0, 1, 1, 1))), 0.76))
```

baulieu2

*Baulieu Index 2***Description**

Compute the index 2 of Baulieu

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{N^2}$$

**Usage**

```
baulieu2(p, q)
```

```
## S4 method for signature 'Partition,Partition'
baulieu2(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
baulieu2(p, q = NULL)
```

**Arguments**

p                      The partition  $P$  or an instance of [PairCoefficients](#)

q                      The partition  $Q$  or NULL

**Methods (by class)**

- baulieu2(p = Partition, q = Partition): Compute given two partitions
- baulieu2(p = PairCoefficients, q = missing): Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

Baulieu FB (1989). "A Classification of Presence/Absence Based Dissimilarity Coefficients." *Journal of Classification*, **6**(1), 233–246. ISSN 0176-4268, 1432-1343, doi:[10.1007/BF01908601](https://doi.org/10.1007/BF01908601).

**Examples**

```
isTRUE(all.equal(baulieu2(new("Partition", c(0, 0, 0, 1, 1)),
                          new("Partition", c(0, 0, 1, 1, 1))), 0.04))
```

---

classificationErrorDistance

*Classification Error Distance*

---

## Description

Compute the classification error distance

$$1 - \frac{1}{n} \max_{\sigma} \sum_{C \in \mathcal{P}} |C \cap \sigma(C)|$$

with  $\sigma$  a weighted matching between the clusters of both partitions. The nodes are the classes of each partition, the weights are the overlap of objects.

## Usage

```
classificationErrorDistance(p, q)
```

```
## S4 method for signature 'Partition,Partition'
classificationErrorDistance(p, q)
```

## Arguments

p	The partition $P$
q	The partition $Q$

## Methods (by class)

- classificationErrorDistance(p = Partition, q = Partition): Compute given two partitions

## Hint

This measure is implemented using [lp.assign](#) from the lpSolve package to compute the maximal matching of a weighted bipartite graph.

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## References

Meila M, Heckerman D (2001). “An Experimental Comparison of Model-Based Clustering Methods.” *Machine Learning*, **42**(1), 9–29.

Meila M (2005). “Comparing Clusterings: An Axiomatic View.” In *Proceedings of the 22nd International Conference on Machine Learning, ICML '05*, 577–584. ISBN 978-1-59593-180-1, doi:[10.1145/1102351.1102424](https://doi.org/10.1145/1102351.1102424).

## Examples

```
isTRUE(all.equal(classificationErrorDistance(new("Partition", c(0, 0, 0, 1, 1)),
                                              new("Partition", c(0, 0, 1, 1, 1))), 0.2))
```

---

compareAll	<i>Compare two partitions with all measures</i>
------------	---

---

## Description

Compute the comparison between two partitions for all available measures.

## Usage

```
compareAll(p, q)
```

```
## S4 method for signature 'Partition,Partition'
```

```
compareAll(p, q)
```

## Arguments

p                      The partition  $P$

q                      The partition  $Q$

## Value

Instance of `data.frame` with columns measure and value

## Methods (by class)

- `compareAll(p = Partition, q = Partition)`: Compare given two `Partition` instances

## Warning

This method will identify every generic S4 method that has a signature "Partition", "Partition" (including signatures with following "missing" parameters, e.g. "Partition", "Partition", "missing") as a partition comparison measure, **except** this method itself (otherwise: infinite recursion). This means one has to take care when defining other methods with the same signature in order not to produce unwanted side-effects!

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## Examples

```
compareAll(new("Partition", c(0, 0, 0, 1, 1)), new("Partition", c(0, 0, 1, 1, 1)))

*Compute the four coefficients  $N_{11}$ ,  $N_{10}$ ,  $N_{01}$ ,  $N_{00}$*

---

## Description

Given two object partitions  $P$  and  $Q$ , of same length  $n$ , each of them described as a vector of cluster ids, compute the four coefficients ( $N_{11}$ ,  $N_{10}$ ,  $N_{01}$ ,  $N_{00}$ ) all of the pair comparison measures are based on.

## Usage

```
computePairCoefficients(p, q)
```

## Arguments

<code>p</code>	The partition $P$
<code>q</code>	The partition $Q$

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

**Examples**

```
pc <- computePairCoefficients(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1)))
isTRUE(all.equal(N11(pc), 2))
isTRUE(all.equal(N10(pc), 2))
isTRUE(all.equal(N01(pc), 2))
isTRUE(all.equal(N00(pc), 4))
```

czezanowski

*Czezanowski Index***Description**

Compute the Czezanowski index

$$\frac{2N_{11}}{2N_{11} + N_{10} + N_{01}}$$

**Usage**

```
czezanowski(p, q)

## S4 method for signature 'Partition,Partition'
czezanowski(p, q)

## S4 method for signature 'PairCoefficients,missing'
czezanowski(p, q = NULL)
```

**Arguments**

p                      The partition  $P$  or an instance of [PairCoefficients](#)  
q                        The partition  $Q$  or NULL

**Methods (by class)**

- czezanowski(p = Partition, q = Partition): Compute given two partitions
- czezanowski(p = PairCoefficients, q = missing): Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

Czezanowski J (1932). "Coefficient of Racial Likeness" Und „Durchschnittliche Differenz." *Anthropologischer Anzeiger*, **9**(3/4), 227–249.

**Examples**

```
isTRUE(all.equal(czezanowski(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1))), 0.5))
```

---

dongensMetric	<i>Dongen's Metric</i>
---------------	------------------------

---

**Description**

Compute Dongen's metric

$$2n - \sum_{C \in P} \max_{D \in Q} |C \cap D| - \sum_{D \in Q} \max_{C \in P} |C \cap D|$$

**Usage**

```
dongensMetric(p, q)
```

```
## S4 method for signature 'Partition,Partition'
```

```
dongensMetric(p, q)
```

**Arguments**

p                      The partition  $P$

q                      The partition  $Q$

**Methods (by class)**

- `dongensMetric(p = Partition, q = Partition)`: Compute given two partitions

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

van Dongen S (2000). "Performance Criteria For Graph Clustering And Markov Cluster Experiments." Technical Report INS-R 0012, CWI.

**See Also**

[projectionNumber](#)

**Examples**

```
isTRUE(all.equal(dongensMetric(new("Partition", c(0, 0, 0, 1, 1)),
                                new("Partition", c(0, 0, 1, 1, 1))), 2))
```

entropy

*Entropy***Description**

Compute the Shannon entropy

$$-\sum_i p_i \log_b p_i$$

**Usage**

```
entropy(x, log_base)
```

```
## S4 method for signature 'numeric,numeric'
entropy(x, log_base)
```

```
## S4 method for signature 'Partition,numeric'
entropy(x, log_base)
```

```
## S4 method for signature 'ANY,missing'
entropy(x, log_base = exp(1))
```

**Arguments**

x	A probability distribution
log_base	Optional base of the logarithm (default: <i>e</i> )

**Methods (by class)**

- `entropy(x = Partition, log_base = numeric)`: Entropy of a partition represented by x

**Hint**

This method is used internally for measures based on information theory

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**Examples**

```
isTRUE(all.equal(entropy(c(.5, .5)), log(2)))
isTRUE(all.equal(entropy(c(.5, .5), 2), 1))
isTRUE(all.equal(entropy(c(.5, .5), 4), .5))

# Entropy of a partition
isTRUE(all.equal(entropy(new("Partition", c(0, 0, 1, 1, 1))), entropy(c(2/5, 3/5))))
```

fagerMcGowan

*Fager & McGowan Index***Description**

Compute the index of Fager and McGowan

$$\frac{N_{11}}{\sqrt{N_{21}N_{12}}} - \frac{1}{2\sqrt{N_{21}}}$$

**Usage**

```
fagerMcGowan(p, q)
```

```
## S4 method for signature 'Partition,Partition'
fagerMcGowan(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
fagerMcGowan(p, q = NULL)
```

**Arguments**

p                      The partition  $P$  or an instance of [PairCoefficients](#)

q                      The partition  $Q$  or NULL

**Methods (by class)**

- fagerMcGowan(p = Partition, q = Partition): Compute given two partitions
- fagerMcGowan(p = PairCoefficients, q = missing): Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

**Examples**

```
isTRUE(all.equal(fagerMcGowan(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1))), 0.25))
```

---

folwkesMallowsIndex	<i>Folwkes &amp; Mallows Index</i>
---------------------	------------------------------------

---

## Description

Compute the index of Folwkes and Mallows

$$\sqrt{\frac{N_{11}}{N_{21}} \frac{N_{11}}{N_{12}}}$$

which is a combination of the two Wallace indices.

## Usage

```
folwkesMallowsIndex(p, q)

## S4 method for signature 'Partition,Partition'
folwkesMallowsIndex(p, q)

## S4 method for signature 'PairCoefficients,missing'
folwkesMallowsIndex(p, q = NULL)
```

## Arguments

p	The partition $P$ or an instance of <a href="#">PairCoefficients</a>
q	The partition $Q$ or NULL

## Methods (by class)

- `folwkesMallowsIndex(p = Partition, q = Partition)`: Compute given two partitions
- `folwkesMallowsIndex(p = PairCoefficients, q = missing)`: Compute given the pair coefficients

## Author(s)

                                     new("Partition", c(0, 0, 1, 1, 1))), 0.5))
```

---

gammaStatistics
Gamma Statistics

---

## Description

Compute the Gamma statistics

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{\sqrt{N_{21}N_{12}N'_{10}N'_{01}}}$$

## Usage

```
gammaStatistics(p, q)
```

```
## S4 method for signature 'Partition,Partition'
gammaStatistics(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
gammaStatistics(p, q = NULL)
```

## Arguments

p                      The partition  $P$  or an instance of [PairCoefficients](#)

q                        The partition  $Q$  or NULL

## Methods (by class)

- gammaStatistics(p = Partition, q = Partition): Compute given two partitions
- gammaStatistics(p = PairCoefficients, q = missing): Compute given the pair coefficients

## Examples

```
isTRUE(all.equal(gammaStatistics(new("Partition", c(0, 0, 0, 1, 1)),
                                new("Partition", c(0, 0, 1, 1, 1))), 1/6))
```

goodmanKruskal

*Goodman & Kruskal Index***Description**

Compute the index of Goodman and Kruskal

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{N_{11}N_{00} + N_{10}N_{01}}$$

**Usage**

```
goodmanKruskal(p, q)
```

```
## S4 method for signature 'Partition,Partition'
goodmanKruskal(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
goodmanKruskal(p, q)
```

**Arguments**

`p`                      The partition  $P$  or an instance of [PairCoefficients](#)

`q`                        The partition  $Q$  or NULL

**Methods (by class)**

- `goodmanKruskal(p = Partition, q = Partition)`: Compute given two partitions
- `goodmanKruskal(p = PairCoefficients, q = missing)`: Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

Goodman LA, Kruskal WH (1954). “Measures of Association for Cross Classifications.” *Journal of the American Statistical Association*, **49**(268), 732–764. ISSN 0162-1459, doi:[10.1080/01621459.1954.10501231](https://doi.org/10.1080/01621459.1954.10501231).

**Examples**

```
isTRUE(all.equal(goodmanKruskal(new("Partition", c(0, 0, 0, 1, 1)),
                                new("Partition", c(0, 0, 1, 1, 1))), 1/3))
```

gowerLegendre

*Gower & Legendre Index***Description**

Compute the index of Gower and Legendre

$$\frac{N_{11} + N_{00}}{N_{11} + \frac{1}{2}(N_{10} + N_{01}) + N_{00}}$$

**Usage**

```
gowerLegendre(p, q)
```

```
## S4 method for signature 'Partition,Partition'
```

```
gowerLegendre(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
```

```
gowerLegendre(p, q)
```

**Arguments**

p                      The partition  $P$  or an instance of [PairCoefficients](#)

q                      The partition  $Q$  or NULL

**Methods (by class)**

- gowerLegendre(p = Partition, q = Partition): Compute given two partitions
- gowerLegendre(p = PairCoefficients, q = missing): Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

**Examples**

```
isTRUE(all.equal(gowerLegendre(new("Partition", c(0, 0, 0, 1, 1)),
                                new("Partition", c(0, 0, 1, 1, 1))), 0.75))
```

---

hamann

*Hamann Coefficient*

---

## Description

Compute the Hamann coefficient

$$\frac{(N_{11} + N_{00}) - (N_{10} + N_{01})}{N}$$

## Usage

```
hamann(p, q)

## S4 method for signature 'Partition,Partition'
hamann(p, q)

## S4 method for signature 'PairCoefficients,missing'
hamann(p, q = NULL)
```

## Arguments

p	The partition $P$ or an instance of <a href="#">PairCoefficients</a>
q	The partition $Q$ or NULL

## Methods (by class)

- hamann(p = Partition, q = Partition): Compute given two partitions
- hamann(p = PairCoefficients, q = missing): Compute given the pair coefficients

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## References

## Examples

```
isTRUE(all.equal(hamann(new("Partition", c(0, 0, 0, 1, 1)),
                        new("Partition", c(0, 0, 1, 1, 1))), 0.2))
```

---

jaccardCoefficient	<i>Jaccard Coefficient</i>
--------------------	----------------------------

---

## Description

Compute the Jaccard coefficient

$$\frac{N_{11}}{N_{11} + N_{10} + N_{01}}$$

## Usage

```
jaccardCoefficient(p, q)

## S4 method for signature 'Partition,Partition'
jaccardCoefficient(p, q)

## S4 method for signature 'PairCoefficients,missing'
jaccardCoefficient(p, q = NULL)
```

## Arguments

p	The partition $P$ or an instance of <a href="#">PairCoefficients</a>
q	The partition $Q$ or NULL

## Methods (by class)

- `jaccardCoefficient(p = Partition, q = Partition)`: Compute given two partitions
- `jaccardCoefficient(p = PairCoefficients, q = missing)`: Compute given the pair coefficients

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## References

Jaccard P (1908). “Nouvelles Recherches Sur La Distribution Florale.” *Bulletin de la Société Vaudoise des Sciences Naturelles*, **44**(163), 223–270.

## Examples

```
isTRUE(all.equal(jaccardCoefficient(new("Partition", c(0, 0, 0, 1, 1)),
                                     new("Partition", c(0, 0, 1, 1, 1))), 1/3))
```

---

 kulczynski

*Kulczynski Index*

---

### Description

Compute the Kulczynski index

$$\frac{1}{2} \left( \frac{N_{11}}{N_{21}} + \frac{N_{11}}{N_{12}} \right)$$

### Usage

```
kulczynski(p, q)
```

```
## S4 method for signature 'Partition,Partition'
kulczynski(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
kulczynski(p, q = NULL)
```

### Arguments

p                      The partition  $P$  or an instance of [PairCoefficients](#)

q                      The partition  $Q$  or NULL

### Methods (by class)

- kulczynski(p = Partition, q = Partition): Compute given two partitions
- kulczynski(p = PairCoefficients, q = missing): Compute given the pair coefficients

### Author(s)

Fabian Ball <fabian.ball@kit.edu>

### References

Kulczynski S (1927). “Zespoly Roslin w Pieninach.” *Bull. Intern. Acad. Pol. Sci. Lett. Cl. Sci. Math. Nat., B (Sci. Nat.)*, **1927**(Suppl 2), 57–203.

### Examples

```
isTRUE(all.equal(kulczynski(new("Partition", c(0, 0, 0, 1, 1)),
                           new("Partition", c(0, 0, 1, 1, 1))), 0.5))
```

larsenAone

*Larsen & Aone Measure***Description**

Compute the measure of Larsen and Aone

$$\frac{1}{|\mathcal{P}|} \sum_{C \in \mathcal{P}} \max_{D \in \mathcal{Q}} \frac{2|C \cap D|}{|C| + |D|}$$

**Usage**

```
larsenAone(p, q)
```

```
## S4 method for signature 'Partition,Partition'
larsenAone(p, q)
```

**Arguments**

p                      The partition  $P$

q                        The partition  $Q$

**Methods (by class)**

- larsenAone(p = Partition, q = Partition): Compute given two partitions

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

**Examples**

```
isTRUE(all.equal(larsenAone(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1))), 0.8))
```

lermanIndex

*Lerman Index***Description**

Compute the Lerman index

$$\frac{N_{11} - E(N_{11})}{\sqrt{\sigma^2(N_{11})}}$$

**Usage**

```
lermanIndex(p, q, c = NULL)
```

```
## S4 method for signature 'Partition,Partition,missing'
```

```
lermanIndex(p, q, c = NULL)
```

```
## S4 method for signature 'Partition,Partition,PairCoefficients'
```

```
lermanIndex(p, q, c = NULL)
```

**Arguments**

p                      The partition  $P$

q                      The partition  $Q$

c                      [PairCoefficients](#) or NULL

**Methods (by class)**

- lermanIndex(p = Partition, q = Partition, c = missing): Compute given two partitions
- lermanIndex(p = Partition, q = Partition, c = PairCoefficients): Compute given the partitions and pair coefficients

**Author(s)**

                             new("Partition", c(0, 0, 1, 1, 1))), 0))
```

---

minkowskiMeasure	<i>Minkowski Measure</i>
------------------	--------------------------

---

## Description

Compute the Minkowski measure

$$\sqrt{\frac{N_{10} + N_{01}}{N_{11} + N_{10}}}$$

## Usage

```
minkowskiMeasure(p, q)
```

```
## S4 method for signature 'Partition,Partition'
minkowskiMeasure(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
minkowskiMeasure(p, q = NULL)
```

## Arguments

p	The partition $P$ or an instance of <a href="#">PairCoefficients</a>
q	The partition $Q$ or NULL

## Methods (by class)

- minkowskiMeasure(p = Partition, q = Partition): Compute given two partitions
- minkowskiMeasure(p = PairCoefficients, q = missing): Compute given the pair coefficients

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## References

---

normalizedLermanIndex    *Normalized Lerman Index*

---

**Description**

Compute the normalized Lerman index

$$L(P, Q) / \sqrt{L(P, P)L(Q, Q)}$$

where  $L$  is the Lerman index.

**Usage**

```
normalizedLermanIndex(p, q, c = NULL)
```

```
## S4 method for signature 'Partition,Partition,missing'
normalizedLermanIndex(p, q, c = NULL)
```

```
## S4 method for signature 'Partition,Partition,PairCoefficients'
normalizedLermanIndex(p, q, c = NULL)
```

**Arguments**

p                      The partition  $P$   
q                      The partition  $Q$   
c                      [PairCoefficients](#) or NULL

**Methods (by class)**

- `normalizedLermanIndex(p = Partition, q = Partition, c = missing)`: Compute given two partitions
- `normalizedLermanIndex(p = Partition, q = Partition, c = PairCoefficients)`: Compute given the partitions and pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

```
isTRUE(all.equal(normalizedLermanIndex(new("Partition", c(0, 0, 0, 1, 1)),
                                         new("Partition", c(0, 0, 1, 1, 1))), 1/6))
```

---

normalizedMutualInformation

*Normalized Mutual Information*

---

**Description**

Compute the mutual information (*MI*) which is normalized either by the minimum/maximum partition entropy (*H*)

$$\frac{MI(P, Q)}{\varphi(H(P), H(Q))}, \varphi \in \{\min, \max\}$$

or the sum

$$\frac{2 \cdot MI(P, Q)}{H(P) + H(Q)}$$

**Usage**

```
normalizedMutualInformation(p, q, type = c("min", "max", "sum"))
```

```
## S4 method for signature 'Partition,Partition,character'
normalizedMutualInformation(p, q, type = c("min", "max", "sum"))
```

```
## S4 method for signature 'Partition,Partition,missing'
normalizedMutualInformation(p, q, type = NULL)
```

**Arguments**

p	The partition $P$
q	The partition $Q$
type	One of "min" (default), "max" or "sum"

**Methods (by class)**

- `normalizedMutualInformation(p = Partition, q = Partition, type = character)`: Compute given two partitions
- `normalizedMutualInformation(p = Partition, q = Partition, type = missing)`: Compute given two partitions with `type="min"`

**Author(s)**

**PairCoefficients-class**

*S4 class to represent coefficients of object pairs for the comparison of two object partitions (say  $P$  and  $Q$ ).*

---

**Description**

S4 class to represent coefficients of object pairs for the comparison of two object partitions (say  $P$  and  $Q$ ).

**Slots**

- N11 The number of object pairs that are in both partitions together in a cluster
- N00 The number of object pairs that are in no partition together in a cluster
- N10 The number of object pairs that are only in partition  $P$  together in a cluster
- N01 The number of object pairs that are only in partition  $Q$  together in a cluster

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**See Also**

[N11 N10 N01 N00](#)

---

Partition-class	<i>Simple S4 class to represent a partition of objects as vector of class labels.</i>
-----------------	---

---

**Description**

This class is a wrapper around a vector but allows only the atomic vectors logical, numeric, integer, complex, character, raw. The reason for this is that only those types seem to make sense as class labels. Furthermore, class labels are immutable.

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**Examples**

```
p <- new("Partition", c(0, 0, 1, 1, 1))
q <- new("Partition", c("a", "a", "b", "b", "b"))

## Not run:
# This won't work:
new("Partition", c(list("a"), "a", "b", "b", "b"))
p[2] <- 2

## End(Not run)
```

---

pearson	<i>Pearson Index</i>
---------	----------------------

---

**Description**

Compute the Pearson index

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{N_{21}N_{12}N'_{01}N'_{10}}$$

**Usage**

```
pearson(p, q)

## S4 method for signature 'Partition,Partition'
pearson(p, q)

## S4 method for signature 'PairCoefficients,missing'
pearson(p, q)
```

**Arguments**

- p                      The partition  $P$  or an instance of [PairCoefficients](#)
- q                      The partition  $Q$  or NULL

**Methods (by class)**

- `pearson(p = Partition, q = Partition)`: Compute given two partitions
- `pearson(p = PairCoefficients, q = missing)`: Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

**Examples**

```
isTRUE(all.equal(pearson(new("Partition", c(0, 0, 0, 1, 1)),
                        new("Partition", c(0, 0, 1, 1, 1))), 1/144))
```

---

peirce	<i>Peirce Index</i>
--------	---------------------

---

**Description**

Compute the Peirce index

$$\frac{N_{11}N_{00} - N_{10}N_{01}}{N_{21}N'_{01}}$$

**Usage**

```
peirce(p, q)

## S4 method for signature 'Partition,Partition'
peirce(p, q)

## S4 method for signature 'PairCoefficients,missing'
peirce(p, q = NULL)
```

**Arguments**

- p                      The partition  $P$  or an instance of [PairCoefficients](#)
- q                      The partition  $Q$  or NULL

**Methods (by class)**

- `peirce(p = Partition, q = Partition)`: Compute given two partitions
- `peirce(p = PairCoefficients, q = missing)`: Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

Peirce CS (1884). “The Numerical Measure of the Success of Predictions.” *Science*, **4**(93), 453–454.

**Examples**

```
isTRUE(all.equal(peirce(new("Partition", c(0, 0, 0, 1, 1)),
                          new("Partition", c(0, 0, 1, 1, 1))), 1/6))
```

---

projectionNumber

*Compute the projection number of two partitions*

---

**Description**

Given two partitions (p, q) represented as vectors of cluster ids, compute the projection number which is the sum of maximum cluster overlaps for all clusters of  $P$  to any cluster of  $Q$ .

**Usage**

```
projectionNumber(p, q)
```

**Arguments**

p	Partition $P$
q	Partition $Q$

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**See Also**

[dongensMetric](#)

**Examples**

```
isTRUE(all.equal(projectionNumber(c(0, 0, 0, 1, 1), c(0, 0, 1, 1, 1)), 4))
```

---

randIndex	<i>Rand Index</i>
-----------	-------------------

---

### Description

Compute the Rand index

$$\frac{N_{11} + N_{00}}{N}$$

### Usage

```
randIndex(p, q)
```

```
## S4 method for signature 'Partition,Partition'
randIndex(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
randIndex(p, q = NULL)
```

### Arguments

p                    The partition  $P$  or an instance of [PairCoefficients](#)

q                    The partition  $Q$  or NULL

### Methods (by class)

- randIndex(p = Partition, q = Partition): Compute given two partitions
- randIndex(p = PairCoefficients, q = missing): Compute given the pair coefficients

### Author(s)

Fabian Ball <fabian.ball@kit.edu>

### References

Rand WM (1971). “Objective Criteria for the Evaluation of Clustering Algorithms.” *Journal of the American Statistical Association*, **66**(336), 846–850.

### Examples

```
isTRUE(all.equal(randIndex(new("Partition", c(0, 0, 0, 1, 1)),
                           new("Partition", c(0, 0, 1, 1, 1))), 0.6))
```

---

registerPartitionVectorSignatures

*Make comparison measures usable with any vectors*

---

### Description

The comparison measures are defined to use the class [Partition](#) as parameters. If you do not want to explicitly convert an arbitrary vector of class labels (probably as a result from another package's algorithm) into a [Partition](#) instance, calling this function will create methods for all measures that allow "ANY" input which is implicitly converted to [Partition](#).

### Usage

```
registerPartitionVectorSignatures(e)
```

### Arguments

e                      The environment to register the methods in (mostly environment() is fine)

### Author(s)

Fabian Ball <fabian.ball@kit.edu>

### Examples

```
library(partitionComparison)
randIndex(new("Partition", c(0, 0, 0, 1, 1)), new("Partition", c(0, 0, 1, 1, 1)))
# [1] 0.6
## Not run: randIndex(c(0, 0, 0, 1, 1), c(0, 0, 1, 1, 1))
# Error in (function (classes, fdef, mtable) :
#   unable to find an inherited method for function 'randIndex' for signature '"numeric", "numeric"'
registerPartitionVectorSignatures(environment())
randIndex(c(0, 0, 0, 1, 1), c(0, 0, 1, 1, 1))
# [1] 0.6
```

---

rogersTanimoto

*Rogers & Tanimoto Index*

---

### Description

Compute the index of Rogers and Tanimoto

$$\frac{N_{11} + N_{00}}{N_{11} + 2(N_{10} + N_{01}) + N_{00}}$$

## Usage

```
rogersTanimoto(p, q)

## S4 method for signature 'Partition,Partition'
rogersTanimoto(p, q)

## S4 method for signature 'PairCoefficients,missing'
rogersTanimoto(p, q)
```

## Arguments

p                      The partition  $P$  or an instance of [PairCoefficients](#)  
q                        The partition  $Q$  or NULL

## Methods (by class)

- rogersTanimoto(p = Partition, q = Partition): Compute given two partitions
- rogersTanimoto(p = PairCoefficients, q = missing): Compute given the pair coefficients

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## References

Rogers DJ, Tanimoto TT (1960). “A Computer Program for Classifying Plants.” *Science*, **132**(3434), 1115–1118. ISSN 0036-8075, 1095-9203, doi:[10.1126/science.132.3434.1115](https://doi.org/10.1126/science.132.3434.1115).

## Examples

```
isTRUE(all.equal(rogersTanimoto(new("Partition", c(0, 0, 0, 1, 1)),
                                new("Partition", c(0, 0, 1, 1, 1))), 3/7))
```

---

russelRao

*Russel & Rao Index*

---

## Description

Compute the index of Russel and Rao

$$\frac{N_{11}}{N}$$

## Usage

```
russelRao(p, q)

## S4 method for signature 'Partition,Partition'
russelRao(p, q)

## S4 method for signature 'PairCoefficients,missing'
russelRao(p, q = NULL)
```

**Arguments**

p	The partition $P$ or an instance of <a href="#">PairCoefficients</a>
q	The partition $Q$ or NULL

**Methods (by class)**

- `russeIRao(p = Partition, q = Partition)`: Compute given two partitions
- `russeIRao(p = PairCoefficients, q = missing)`: Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

Russel PF, Rao TR (1940). "On Habitat and Association of Species of Anopheline Larvae in South-Eastern Madras." *Journal of the Malaria Institute of India*, **3**(1), 153–178.

**Examples**

```
isTRUE(all.equal(russeIRao(new("Partition", c(0, 0, 0, 1, 1)),
                           new("Partition", c(0, 0, 1, 1, 1))), 0.2))
```

---

rvCoefficient	<i>RV Coefficient</i>
---------------	-----------------------

---

**Description**

Compute the RV coefficient

$$\frac{n + 2N_{11}(p)}{\sqrt{(2N_{21}(p) + n)(2N_{12}(p) + n)}}$$

**Usage**

```
rvCoefficient(p, q)
```

```
## S4 method for signature 'Partition,Partition'
rvCoefficient(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
rvCoefficient(p, q = NULL)
```

**Arguments**

p	The partition $P$ or an instance of <a href="#">PairCoefficients</a>
q	The partition $Q$ or NULL

**Methods (by class)**

- sokalSneath1(p = Partition, q = Partition): Compute given two partitions
- sokalSneath1(p = PairCoefficients, q = missing): Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

**References**

Sokal RR, Sneath PHA (1963). *Principles of numerical taxonomy*. Freeman, San Francisco.

**Examples**

```
isTRUE(all.equal(sokalSneath1(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1))), 7/12))
```

---

sokalSneath2

*Sokal & Sneath Index 2*

---

**Description**

Compute the index 2 of Sokal and Sneath

$$\frac{N_{11}}{N_{11} + 2(N_{10} + N_{01})}$$

**Usage**

```
sokalSneath2(p, q)
```

```
## S4 method for signature 'Partition,Partition'
sokalSneath2(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
sokalSneath2(p, q = NULL)
```

**Arguments**

p                      The partition  $P$  or an instance of [PairCoefficients](#)

q                      The partition  $Q$  or NULL

**Methods (by class)**

- sokalSneath2(p = Partition, q = Partition): Compute given two partitions
- sokalSneath2(p = PairCoefficients, q = missing): Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

## References

Sokal RR, Sneath PHA (1963). *Principles of numerical taxonomy*.. Freeman, San Francisco.

## Examples

```
isTRUE(all.equal(sokalSneath2(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1))), 0.2))
```

---

sokalSneath3	<i>Sokal &amp; Sneath Index 3</i>
--------------	-----------------------------------

---

## Description

Compute the index 3 of Sokal and Sneath

$$\frac{N_{11}N_{00}}{\sqrt{N_{21}N_{12}N'_{01}N'_{10}}}$$

## Usage

```
sokalSneath3(p, q)

## S4 method for signature 'Partition,Partition'
sokalSneath3(p, q)

## S4 method for signature 'PairCoefficients,missing'
sokalSneath3(p, q = NULL)
```

## Arguments

p                      The partition  $P$  or an instance of [PairCoefficients](#)  
q                        The partition  $Q$  or NULL

## Methods (by class)

- sokalSneath3(p = Partition, q = Partition): Compute given two partitions
- sokalSneath3(p = PairCoefficients, q = missing): Compute given the pair coefficients

## Author(s)

Fabian Ball <fabian.ball@kit.edu>

## References

Sokal RR, Sneath PHA (1963). *Principles of numerical taxonomy*.. Freeman, San Francisco.

## Examples

```
isTRUE(all.equal(sokalSneath3(new("Partition", c(0, 0, 0, 1, 1)),
                             new("Partition", c(0, 0, 1, 1, 1))), 1/3))
```

---

variationOfInformation

*Variation of Information*

---

### Description

Compute the variation of information

$$H(P) + H(Q) - 2MI(P, Q)$$

where  $MI$  is the mutual information,  $H$  the partition entropy

### Usage

```
variationOfInformation(p, q)
```

```
## S4 method for signature 'Partition,Partition'
variationOfInformation(p, q)
```

### Arguments

p	The partition $P$
q	The partition $Q$

### Methods (by class)

- variationOfInformation(p = Partition, q = Partition): Compute given two partitions

### Author(s)

Fabian Ball <fabian.ball@kit.edu>

### References

### Examples

```
isTRUE(all.equal(variationOfInformation(new("Partition", c(0, 0, 0, 1, 1)),
                                         new("Partition", c(0, 0, 1, 1, 1))),
               0.763817))
```

wallaceI

*Wallace I***Description**

Compute Wallace' index I

$$\frac{N_{11}}{N_{21}}$$

**Usage**

```
wallaceI(p, q)
```

```
## S4 method for signature 'Partition,Partition'
```

```
wallaceI(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
```

```
wallaceI(p, q = NULL)
```

**Arguments**

p                      The partition *P* or an instance of [PairCoefficients](#)

q                        The partition *Q* or NULL

**Methods (by class)**

- wallaceI(p = Partition, q = Partition): Compute given two partitions
- wallaceI(p = PairCoefficients, q = missing): Compute given the pair coefficients

**Author(s)**

**Examples**

```
isTRUE(all.equal(wallaceI(new("Partition", c(0, 0, 0, 1, 1)),
                          new("Partition", c(0, 0, 1, 1, 1))), 0.5))
```

wallaceII

*Wallace II***Description**

Compute Wallace' index II

$$\frac{N_{11}}{N_{12}}$$

**Usage**

```
wallaceII(p, q)
```

```
## S4 method for signature 'Partition,Partition'
wallaceII(p, q)
```

```
## S4 method for signature 'PairCoefficients,missing'
wallaceII(p, q = NULL)
```

**Arguments**

p                      The partition  $P$  or an instance of [PairCoefficients](#)

q                      The partition  $Q$  or NULL

**Methods (by class)**

- wallaceII(p = Partition, q = Partition): Compute given two partitions
- wallaceII(p = PairCoefficients, q = missing): Compute given the pair coefficients

**Author(s)**

Fabian Ball <fabian.ball@kit.edu>

```

---

[<-,Partition-method    *Subsetting [Partition](#) instances*

---

### Description

This method overrides the standard subsetting to prevent alteration (makes partitions, i.e. class labels, immutable).

### Usage

```
## S4 replacement method for signature 'Partition'  
x[i, j] <- value
```

### Arguments

x	A <a href="#">Partition</a> instance
i	<a href="#">Extract</a>
j	<a href="#">Extract</a>
value	<a href="#">Extract</a>

### Author(s)

Fabian Ball <fabian.ball@kit.edu>
